Development of the Self-Report Questionnaire about Opioids (SRQO)

Development of SRQO: Using the Self-Report Questionnaire about Opioids (SRQO) to Measure Opioid Abuse and Dependence

Journal of Substance Abuse Treatment 2005; 28:1-10

© 2005 Elsevier Inc.

Abstract: Opioid abuse and dependence are leading causes of death in the United States. There is a need to identify and measure opioid abuse and dependence in a variety of settings.

The purpose of this study was to develop a questionnaire to assess self-reported opioid abuse and dependence in a variety of settings. The SRQO questionnaire was developed using a series of focus group sessions and a series of pilot studies. The questionnaire was tested in a variety of settings including a primary care clinic, a substance abuse treatment center, and a correctional facility. The questionnaire was found to be a valid and reliable measure of self-reported opioid abuse and dependence in a variety of settings.

The questionnaire was found to be a valid and reliable measure of self-reported opioid abuse and dependence in a variety of settings. The questionnaire was found to be a valid and reliable measure of self-reported opioid abuse and dependence in a variety of settings. The questionnaire was found to be a valid and reliable measure of self-reported opioid abuse and dependence in a variety of settings. The questionnaire was found to be a valid and reliable measure of self-reported opioid abuse and dependence in a variety of settings.
