## Abstract

### 1. INTRODUCTION

#### 1.1. The challenge of the new world of work

The rapid changes in the labor market, driven by digitalization and automation, are creating a new world of work. This new world is characterized by a high demand for digital skills, a shift towards flexible work arrangements, and a focus on continuous learning and development.

Employers and employees are both facing challenges in this new world. Employers need to attract and retain talent with the right skills, while employees need to acquire and update their skills to remain competitive. This requires a focus on lifelong learning and a shift in the role of the state in education. The European Union's digital agenda provides a framework for addressing these challenges.

Key challenges include: the need for digital skills, the need for flexible work arrangements, the need for continuous learning and development, and the need for a shift in the role of the state in education. The European Union's digital agenda provides a framework for addressing these challenges. The agenda focuses on digital skills, digital jobs, digital entrepreneurship, and digital governance. It also emphasizes the importance of lifelong learning and the role of the state in education.

The goal of this research is to explore the challenges of the new world of work and to propose solutions based on the European Union's digital agenda. The research will focus on the following areas:

#### 1.2. Research objectives

##### 1.2.1. Research objectives

The research objectives are to: identify the challenges of the new world of work, analyze the European Union's digital agenda, and propose solutions based on the agenda. The research will also explore the role of the state in education and the importance of lifelong learning.

Key research questions include: what are the challenges of the new world of work, what are the key elements of the European Union's digital agenda, and how can the agenda be used to address the challenges of the new world of work? The research will also explore the role of the state in education and the importance of lifelong learning.

#### 1.2.2. Research objectives

The research objectives are to: identify the challenges of the new world of work, analyze the European Union's digital agenda, and propose solutions based on the agenda. The research will also explore the role of the state in education and the importance of lifelong learning.

- Digital skills development
- Digital jobs creation
- Digital entrepreneurship
- Digital governance
- Lifelong learning
- Role of the state in education

The research objectives are to: identify the challenges of the new world of work, analyze the European Union's digital agenda, and propose solutions based on the agenda. The research will also explore the role of the state in education and the importance of lifelong learning.

The research objectives are to: identify the challenges of the new world of work, analyze the European Union's digital agenda, and propose solutions based on the agenda. The research will also explore the role of the state in education and the importance of lifelong learning.

#### 1.2.3. Research objectives

The research objectives are to: identify the challenges of the new world of work, analyze the European Union's digital agenda, and propose solutions based on the agenda. The research will also explore the role of the state in education and the importance of lifelong learning.
